

GIT CHEAT SHEET

Objective of Git

Version Control

Tracking changes

SETUP

Setting the Username

```
$git config --global user.name "x"
```

Setting the Email

```
$git config --global user.email "x"
```

Git version

```
$git --version
```

BASICS

Help

To ask for help

Master

Primary or default branch

Origin

Default upstream repository

HEAD

Current branch

HEAD^

Parent of current branch

Remote

Collaborative shared repository

Merge conflicts

Conflicting file changes

Fork

Copy for experimentation

Create

Browse

Change

Update

Push

Creating a repo

```
$git init <directory>
```

Cloning a repo

```
$git clone <url>
```

Renaming a file

```
$git rm <file>
```

Viewing Status

```
$git status
```

Display commits

```
$git log
```

Compare change

```
$git diff[oldid newid]
```

List all tags

```
$git tag -l
```

Stage a file

```
$git add <filename>
```

Stage all files

```
$git add .
```

Commit changes

```
$git commit -m"msg"
```

Quick commit

```
$git commit -am"msg"
```

Pull changes

```
$git pull
```

Fetch changes

```
$git fetch
```

Merge changes

```
$git merge
```

Fetch branches

```
$git fetch --all
```

Basic push

```
$git push
```

Branch push

```
$git push origin <branch>
```

Force push

```
$git push --force
```

Push all branches

```
$git push --all
```

BRANCH

Create a new branch

```
$git branch <new branch>
```

Switching the branch

```
$git checkout <branch>
```

Creating branch and switch

```
$git checkout -b <new branch>
```

Delete merged branch

```
$git branch -d <branch>
```

Delete branch whether merged or not

```
$git branch -D <branch>
```

MERGE

Branch merge command

```
$git merge <branch_name>
```

Targeted commit merge

```
$git merge <commit_hash>
```

Edit merge message

```
$git merge --edit <branch_name>
```

Merge with fast forward

```
$git merge --ff-only <branch_name>
```

Merge with no fast forward

```
$git merge --no-ff <branch_name>
```

GIT WORKFLOW

Working directory

Staging area

Committed area

Remote repository

add

commit

push

pull

checkout

commit

SYNCHRONISING COMMANDS

Adding a remote repository

```
$git remote add <alias><url>
```

View all remote connection

```
$git remote
```

Remove connection

```
$git remote remove <alias>
```

Fetch all the branches

```
$git fetch <alias>
```

Fetch specific connection

```
$git fetch <alias><branch>
```

Upload local content

```
$git push <alias>
```

Upload branch

```
$git push <alias><branch>
```

Rename a connection

```
$git remote rename <old> <new>
```

STASHING

Git stash command

```
$git stash
```

List all the stashes

```
$git stash list
```

GIT TOOLS

Git tools helps to manage code versions, collaborate, control repositories.
